JamboreeEdition Edition 1&2.pdf 2017-First two editions of the textbook used to teach statistics to a lot of undergraduate students in India. Theory and Methods in Data Analysis By Austin Bradford Hill.pdf 2018-Title of book in PDF. 2019 Cited by 4 Impact of social, political and economic drivers on the cost-effectiveness of cervical screening in India: a model-based analysis. IJGK Online, 3(1): 7–27. doi: Epub. by Aparna Phalade 2021 Cited by 2 IBSS.RANDOM.2013.pdf 2017-IBSS-2013 RANDOM, J & O'Donnell, T. 2013. IBSS-2013 RANDOM, J & O'Donnell, T. Cited by 1 Joint professorship in the Department of Statistics, Utkal University, Bhubaneswar (OU-JPR-1675). . Department of Statistics, Utkal University, Bhubaneswar, India (OU-JPR- 1675) 2016 Cited by 3 Cited by 1 Modified linear-quadratic treatment planning (MLQT) is a combined, dose-volume-weighted linear-quadratic (LQ) model used in radiotherapy practice to estimate the biological effect of the dose delivered to the tumour. Linear-quadratic, however, is a theoretical model and may not be valid for many tumour types. As such, the modified linear-quadratic (MLQT) LQ model is derived from the baseline linear-quadratic (LQ) model and the Gompertz model of cell kill. An advantage of the MLQT model is that it has a simpler one-to-one correspondence with the corresponding LQ model. Thus, the MLQT model can be directly used in treatment planning and dose-response assessment. In this study, we compared the LQ, MLQT and gamma models and discuss their use in dose-response analysis and treatment planning. We also present a unique advantage of the gamma model by considering the interpatient variability in tumour control probabilities due to variability in normal tissue sensitivity. Recommendations of the MLQT model over the other dose-response models and
